MOTTA DI LIVENZA

year 2007

HISTORIC AND TERRITORIAL PROJECT

The military topographic geometrical maps of the Venetian Dukedom, drafted under the guide of the general Anthon von Zach between 1798 and 1805, are a complete and reliable document and the starting point of our analysis of the territory of Motta di Livenza.

They bear witness also to the crisis of the land due to frequent rainfalls and floods of the rivers Monticano and Livenza. The clay soil, preventing water to permeate, produced mud, which hampered the travels on the main roads. This situation could last till April, which is why all winter long people preferred the boat along the river Monticano to go from Motta to Gorgo (6 km). The maps show a land moulded by water.

From the XIX century the foreign governments launched the cadastral assessments, the first one, which started during the Austrian occupation, was made by the French and finally completed by the Austrian, it is known as the Napoleonic cadastre and dates back to the 1811.

MONASTIER (TREVISO)

year 2008

HISTORIC AND TERRITORIAL PROJECT

The area of the town of Monastier (Treviso) has been studied comparing the current regional technical map with the map of the Geographic Military Institute (1923) and the ones of the Napoleonic (1810) and Austrian (1842) land registers to highlight changes.

The original map of 1810 cannot be consulted and the Venetian State Archive does not have photos of the eastern part of the area, beyond the river Meolo.

As far as history is concerned the Benedictine abbey of S.Maria del Pero, whose properties occupied a large portion of the territory, influenced the dimension and the exploitation of the land, witness the latifundium marking the area, an exception in the countryside surrounding Treviso.

At the end of the XVI century the decline of the Abbey together with the crisis of the agriculture – which hit the entire Po Valley in the first half of the XVII century – marked a gradual subdivision of the latifundia.

The papers, which bear witness to the setting up of the municipalities of Monastier and Losson (1806), show that a large part of the territory was uncultivated and became wooded or flooded land. Moreover two settlements were founded along the river Meolo, which passes through the area from north-west to south-east with large bends, and whose flow has been changed, witness the comparison between the Napoleonic and the Austrian land registers. The first settlement was founded by the Benedictine Abbey, the second one is the current area occupied by the municipality of Monastier.

ZERO BRANCO (TREVISO)

year 2008

HISTORIC AND TERRITORIAL PROJECT

The area of Zero Branco has been studied comparing the current regional technical map with the map of the Geographic Military Institute (1940) and the ones of the Napoleonic (1810) and Austrian (1842) land registers as well as the descriptions gathered by Anthon von Zach (1798-1805) to highlight changes.

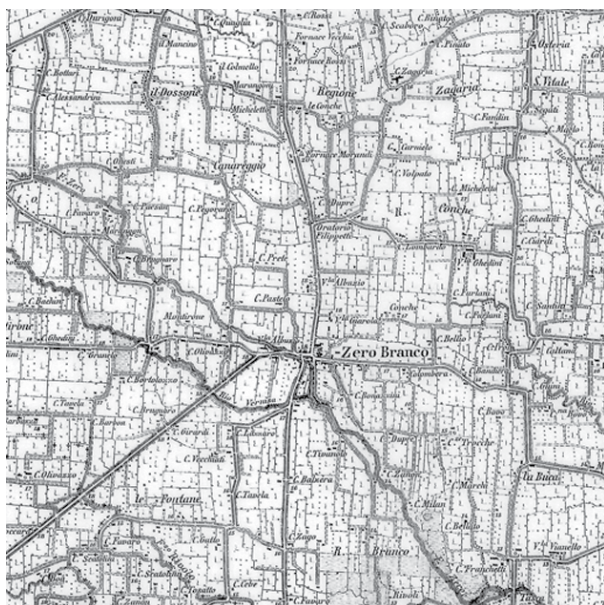

As regards history the area has not changed from the topographic point of view, whereas as far as landscape is concerned a gradual loss of wooded land to take advantage of agriculture can be seen. The only real changes over 150 years are the highway nr. 155, highlighted in the Austrian cadastre, and the bypass of the city center, shown in the map of the Geographic Military Institute. The other great changes which can be seen in the regional technical map happened later.

In all the maps the river has a more meandering flow compared with today's one. its bights would be regulated after 1940.
